All-On-4 In Toronto Offered At The Thornhill Smile Centre General+Aesthetic Dentistry

Dr. Dan Hagi, D.D.S., F.A.G.D., F.I.C.O.I., a Toronto dental surgeon and implantologist, is pleased to announce that his practice, Thornhill Smile Centre General+Aesthetic Dentistry, is offering All-On-4 dental implant solutions in Thornhill, Ontario.

THORNHILL, ON, CANADA, September 30, 2011 **/24-7PressRelease/** -- Dr. Dan Hagi, D.D.S., F.A.G.D., F.I.C.O.I., a Toronto dental surgeon and implantologist in the Toronto area and owner of the Thornhill Smile Centre implant boutique, is pleased to announce that his practice is now one of only a few comprehensive dental facilities offering the innovative Eat, Smile and Chew Today (ESCT) Treatments based on the All-On-4 dental implants concept in Toronto. All-On-4 is a unique dental implant technique that provides patients with a new set of permanent teeth attached to dental implants in just one day.

The Toronto All-On-4 dental implant procedure is innovative in its approach to providing patients with dental implants and a new set of permanent teeth. Rather than the lengthy year-long procedure traditionally required when patients get dental implants, the ESCT technique completes the process in just one day.

Toronto implant dentist, Dr. Hagi, his team and laboratory technicians, do all of the preliminary work ahead of time to prepare for the "teeth in a day" procedure, including any necessary x-rays, CT scans and impressions. He has done numerous cases to date and has truly improved the quality of life for these patients. When patients come into his Thornhill dental boutique for their All-On-4 procedure, they have a set of four to six dental implants permanently placed into the jawbone. These implants are angled in such a way as to take full advantage of the healthiest bone available so that no bone grafts are usually required. A full set of teeth can immediately be placed on the new implants and the patient leaves the Thornhill boutique with their new teeth in just one visit.

"All-On-4 is a revolutionary approach to dental restoration and provides patients with a new set of teeth in just one day," explains the Toronto dentist, Dr. Hagi. "This procedure is a great option for those that don't want conventional dentures or go through the otherwise lengthy process of traditional dental implants, which may involve bone grafts and a long healing process before the new replacement teeth can be permanently attached. With ESCT, patients can walk out of my office on the same day with a full set of replacement teeth that are securely and permanently attached that restores their confident smile for years past."

In addition to the All-On-4 procedure, the Toronto dental surgeon also offers the option for traditional dental implants to his patients. He finds however, that the ESCT technique is the most desirable to patients for a number of reasons. The entire process is completed quickly, it requires less invasive surgery and healing, and patients do not have to spend a long period of time wearing temporary poorly fitting dentures while their dental implants heal. "Many of my Toronto patients opt for All-On-4 due to the many benefits the procedure offers over traditional implant retained dentures," explains Dr. Hagi. "This is one of the most innovative dental implant techniques available, yet there are only a limited number of surgeons that offer the advanced procedure because of lack of training and because lack of having a comprehensive treatment facility."

Dr. Dan Hagi, a dental surgeon in Toronto, offers the All-On-4 dental implant procedure at his Thornhill dental boutique practice, Thornhill Smile Centre General+Aesthetic Dentistry.
